Continuation of 11.: Regarding the rejection of claim 10 under 35 U.S.C. 103(a), applicant argues at page 12 of remarks that "Viswanath may teach a "network access request" and selecting a particular "gateway" to which to forward the "network access request". But this is very different than Applicant's claimed "outgoing request for each object in the virtual resource" which is not the same as a request to access a network. In fact, Viswanath is silent with regards to a "request for each object in the virtual resource". In response to this argument, it is noted that Viswanath was not relied on to teach a "request for each object in the virtual resource". Therefore, the argument is moot. Applicant further argues that "nowhere in the cited section does Chebrolu suggest the claimed "transmitting an outgoing request for each object in the virtual resource" wherein each request is a "request for each object in the virtual resource"". This argument is not persuasive because applicant failed to establish patentable difference between scheduling packets over multiple links, as taught by Chebrolu, and "transmitting an outgoing request for each object in the virtual resource", as claimed. In addition, applicant failed to provide any argument as to how the claimed "transmitting an outgoing request for each object in the virtual resource" is patentably distinct from Rodriguez's method of "dynamic parallel access to replicated content in the Internet". Absent specifically pointing out patentable differences between teachings of prior art references relied on and claimed limitations, applicant's argument cannot be held as persuasive.

Applicant further argues at page 14 of remarks that: "Viswanath may teach an IP address associated with a request, but Viswanath does not teach, disclose, or suggest the claimed "wherein each outgoing request specifies the available wireless network interface assigned to the corresponding object in the virtual resource". In response to this argument, it is noted that one cannot show nonobviousness by attacking references individually where the rejection is based on combination of references. Applicant presented no argument specifically pointing out how the limitation of "wherein each outgoing request specifies the available wireless network interface assigned to the corresponding object in the virtual resource" is not being taught, disclosed, or suggested by a combination of Viswanath, Chebrolu, Rodriguez, and Greer. General allegation that "nor do Chebrolu, Rodriguez, and/or Greer remedy this deficiency in Viswanath" is not sufficient to establish patentable difference between the argued limitation and cited art. As to any arguments not specifically addressed, they are the same as those discussed above.
